# Heat set

SCN-F003-BAS

## Function

Intended for experimental study, physics laboratory, carrying out physics and natural science experiments on: Thermal expansion. The variation in volume and variation in the area of ¿¿metallic bodies, as a function of temperature. What is meant by a Gravesande ring. The volumes of metallic bodies vary when their temperature changes. The areas of metallic bodies vary when their temperature changes. The dimensions of a hole in a metal plate change when the plate is heated, etc.
