

# Geissler tube kit, with power, vacuum pump

## EQ162E

#### **Function**

Studies of modern physics associated with cathode rays and their influences. Light emission caused by high electrical voltage in a rarefied Geissler tube. Interaction between magnetic fields. Color emitted inside the tube. Influence of pressure and nature of gas in the radiation emitted.

Power supply:

Inlet: 127/220VAC - 50/60 Hz.

Outlet: 4 kVCC

### **Knowledge areas**

Physics

#### Level
