

Solid and fluid mechanics set, curved ramp EQ005

Function

Study of mechanics (pendulum, springs, thrust, pulleys, movement quantity; moment of inertia, collisions, horizontal launch, work and energy, SHM, dynamics of particle and rigid body, etc.

Knowledge areas

Physics

Key Experiments

The reach of a projectile horizontal launch The mechanical advantage of the fixed pulley The mechanical advantage of the movable pulley The experimental determination of the mechanical advantage of the parallel block and tackle system The calibration of a rubber belt, the calibration of a coil spring, the elastic hysteresis General conditions of static equilibrium for a supported rigid spherical body The amount of linear movement (horizontally) of a sphere in a horizontal launch The simple pendulum
